

### 3-ESS2-2 Earth's Systems

Students who demonstrate understanding can:

**3-ESS2-2. Obtain and combine information to describe climates in different regions of the world.**

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

#### Science and Engineering Practices

##### Obtaining, Evaluating, and Communicating Information

Obtaining, evaluating, and communicating information in 3–5 builds on K–2 experiences and progresses to evaluating the merit and accuracy of ideas and methods.

- Obtain and combine information from books and other reliable media to explain phenomena.

#### Disciplinary Core Ideas

##### ESS2.D: Weather and Climate

- Climate describes a range of an area's typical weather conditions and the extent to which those conditions vary over years.

#### Crosscutting Concepts

##### Patterns

- Patterns of change can be used to make predictions.

#### Observable features of the student performance by the end of the grade:

1	Obtaining information
a	Students use books and other reliable media to gather information about: <ol style="list-style-type: none"> <li>Climates in different regions of the world (e.g., equatorial, polar, coastal, mid-continental).</li> <li>Variations in climates within different regions of the world (e.g., variations could include an area's average temperatures and precipitation during various months over several years or an area's average rainfall and temperatures during the rainy season over several years).</li> </ol>
2	Evaluating information
a	Students combine obtained information to provide evidence about the climate pattern in a region that can be used to make predictions about typical weather conditions in that region.
3	Communicating information
a	Students use the information they obtained and combined to describe*: <ol style="list-style-type: none"> <li>Climates in different regions of the world.</li> <li>Examples of how patterns in climate could be used to predict typical weather conditions.</li> <li>That climate can vary over years in different regions of the world.</li> </ol>
